

UUTUUKSIA JUAL Rooftec valikoimaan 2024!

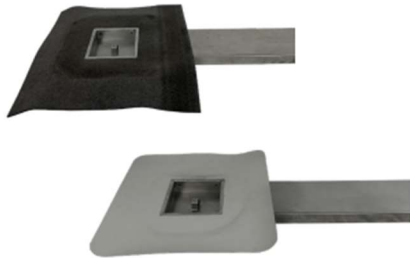

INSPECTION CHAMBER FOR GREEN ROOFS

The inspection chamber ensures reliable drainage of green roofs, while providing easy access for inspection, cleaning and maintenance of the roof outlet. The inspection chamber is placed directly on the roof membrane on a green roof with vegetation, gravel layer, etc.

OUTLET WITH FLEX TUBE

JUAL outlet with flexible tube is used for special applications where traditional pipe routing is not possible. The flexible tube can be shaped and routed around obstacles to the drainpipe.

See page 22

PARAPET OUTLET 160X40

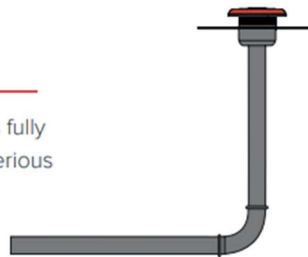

The new JUAL parapet outlet with 160x40 mm rectangular pipe has a very low installation height and only protrudes 40 mm into the insulation layer.

Still, it has great flow rate performance and is available in configurations with bituminous and synthetic membranes.

SAFETY DRAINAGE PRODUCTS

The new JUAL DrainHero safety drainage assortment offers fully tested products and systems that can be used to prevent serious damage and roof collapse caused by water build-up.

See pages 36-43

CABLE FLASHING Ø90 MM WITH DETACHABLE TOP

The new cable flashing with detachable top ensures easy and efficient installation of cables, pipes, etc. on flat roofs with synthetic or bituminous membranes. The top is fitted for rain protection after the installation work is completed.

See page 61

SKIRT FOR SOIL PIPE VENTILATION

The JUAL Skirt for Soil Pipe ventilation is the way to create a stylish look.

Skirts are used where you want the soil pipe ventilation to appear black to match other roofing products.
